Scientific American.
A handsomely illustrated weekly. Largest circulation of any scientific journal. Terms, \$3 a year; four months, \$1. Sold by all newsdealers.
MUNN & Co., 361 Broadway, New York
Inventors receive 50¢ per copy. Washington, D. C.

DAIRYING

CONTAGIOUS ABORTION IN COWS.

By Dr. David Roberts, Wisconsin State Veterinarian.

A radical change has been brought about concerning contagious abortion in cattle. The time has been when stock owners whose herds were afflicted with contagious abortion did everything in their power to keep the fact from becoming known to the public and in order to be successful in doing so they would avoid conversing with other stock raisers on this subject, and I dare say in this way were handicapped in obtaining valuable information as to how to positively wipe contagious abortion out of their herds.

Their reasons for keeping this disease in their herd a secret was that they knew very well that no intelligent or well posted stockman would think of buying stock from a herd afflicted with contagious abortion, and I want to say that the stock raisers of this country are becoming so well posted and well educated along this line that they are protecting themselves with this knowledge and will not consider the purchase of animals from a diseased or afflicted herd.

The time has now come when bright, well posted and successful stock raisers discuss the subject of contagious abortion in cattle freely for the reason that most of them have already had experience with this dreadful disease and have obtained information and have learned that it can positively be wiped out, consequently they have no fear of the disease, nor have they any fear of telling their friends that they have had it in their herd but have wiped it out and are perfectly willing to advise those who desire to obtain information as to how this can be done.

The knowledge concerning contagious abortion in cattle has been spread throughout this country by the successful stock raisers. They have not only done this in the past but are doing so at the present time and by so doing, they are building up the reputation of our live stock industry, thus increasing the value of each animal, as it is reasonable to expect that a strong, healthy, money-making cow

ought to be worth more than two ordinary afflicted or suspicious ones. I am sure that if this offer were made to any well posted stock man that he would prefer the one cow with the clean bill of health attached, to the two suspicious cows unaccompanied by the bill of health.

I feel that it is a privilege and it should be the duty of every stock owner in this great progressive country, to at least see that his animals are free from contagious or infectious diseases, such as tuberculosis and contagious abortion.

The moment that these two diseases are wiped out of our herds, the more valuable our stock will become, the more saleable they will become. They will be sought for by other people who are less careful concerning the health of their stock. It matters not so much as to what breed of stock but it matters much as to how free they are from disease and as it has been said before, it is within the power of every stock owner in the world to own healthy stock. This being true I will close by asking the question, which is the most profitable, healthy or diseased stock? Be fair with yourself and instead of answering me answer yourself.

FEEDING MILCH COWS.

By Dr. David Roberts, Wisconsin State Veterinarian.

Milch cows require different feed than beef cattle. You should not feed much fat forming foods as your cows would lay on fat instead of producing milk. Feed more silage or roots in the winter.

Daily feed for a thousand-pound cow: 40 pounds of silage, 7 pounds clover hay, 8 pounds of grain. The cows that are soon to freshen should be fed on succulent feed, such as silage or roots, bran, linseed-meal with a little oats. Keep the bowels open and do not feed very heavy on grain just before or after calving.

After calving, give bran mashes and warm the drinking water for a few days. Allow the calf to suck for about two days and then feed the mothers milk from a pail for about two weeks, about three quarts twice a day; after that reduce it with skim

milk or warm water so that at the end of the fourth week the calf will be getting all skim milk or half whole milk and half warm water with some reliable stock tonic to aid digestion. Keep a supply of good clover or alfalfa hay within reach and also some ground oats, with a little linseed meal mixed with it.

After the calf eats the ground feed, gradually get him used to eating whole oats, as this is the best feed for him up to six months old.

The heifers should not be bred until fifteen or eighteen months old.

The Elgin Dairy, Salt Lake City, pays the highest market price for cream at all times and gives absolutely the correct test. We offer no premiums, for any farmer knows they pay the premium in the long run. We are doing an honest, legitimate business and want your cream. Send your cream in Red cans and we will send you pay for all the cream delivered.

ALL THE SAME TO HIM.

One of a party of gentlemen left his corner seat in an already crowded railway car to go in search of something to eat, leaving a rug to reserve his place. On returning he found that, in spite of the rug and the protests of his fellow passengers, the seat had been usurped by a woman clad in handsome clothes. With flashing eyes she turned upon him:

"Do you know, sir, that I am one of the directors' wives?"

"Madam," he replied, "were you the director's only wife I should still protest."

HE WAS A RECORD-BREAKER.

An earnest clergyman one Sunday morning was exhorting those who had anxious and troubled consciences to be sure and call on their pastor for guidance and prayer.

"To show you, my brethren, the blessed results of these visits with your pastor," said he, "I will state to you that only yesterday a gentleman of wealth called upon me for counsel and instruction; and now today, my friends—today he sits among us, not only a Christian, but a happy husband and father."

A young lady in the audience whispered to a matron: "Wasn't that pretty quick work?"
